

3D simulation - User's Guide

Known Issue : When starting the application, the 3D window may appear as white, this is due to your computer graphic board. Under the Activ8/Wizard environment, click on the "Man" button, under the Falcon, click on "Reset", this will refresh the 3D window and solve the problem.

When demonstrating door, product and human/vehicle interactions, keep these few points in mind:

1. Very large detection ranges may detect later than normal settings
2. Use the "Senior" to demonstrate the MTF mode vs Unidirectional + hold time 0 or 1
3. Under the Activ8/Wizard application, a parallel trajectory will lead to NO Detection.

If you're lost, click on one of the pedestrian, the same as the one you are currently using, this will reset the cameras views and some environment variables.
